

DATABASE

The owner of Mueblería Fénix is looking to implement a computer system to efficiently manage her business, which involves sellers responsible for conducting various transactions related to different types of furniture.

For each seller, it is required to store their seller code, seller full name, seller phone number, and seller address.

Each transaction, associated with a seller, should include the transaction invoice number, transaction amount, and transaction payment method. A seller can carry out multiple transactions, and each transaction is recorded in the database along with the date it took place.

The furniture store has various types of furniture. For each piece of furniture, information such as furniture available units, furniture model name, furniture type of furniture, and furniture selling price is desired.

A seller can sell multiple pieces of furniture. Additionally, multiple transactions can be carried out by a customer. For each customer, the desired information includes customer code, customer full name, customer phone number, and customer address.
